

Easy Grade Pro 4: Installing Remotely

Considerations before upgrading to EGP 4 (Easy Grade Pro)

- * EGP 4.0 is not able to sync to Palms
- * Once upgraded to EGP 4.0 not able to go back to vs. 3.6

1. Connect to the asdpublix server located at DP services and download the Easy Grade Pro 4.0 Installer and the ASDimport4email.epi (Macintosh Files > Easy Grade Pro > For OS X Users)
2. Install EGP in the Application folder on the computer where you are running ARD (Apple Remote Desktop). This will allow you to copy the application to other computers directly.
3. Once you have EGP4 installed you need to put the ASDimport4email.epi in the plug-in folder, inside the EGP 4 folder.

Launch EGP 4.0 and enter your school's serial number. (If you don't know what this is you can find it by launching EGP 3.6 and going to the about Easy Grade Pro)

4. You are now ready to copy EGP 4 to any computer that needs it before you have it on an image. With ARD (Apple Remote Desktop) select all of the computers that you want EGP 4 on. Using the copy function, copy the EGP 4 folder from your application folder to the application folder on the hard drive of the computer needing EGP 4.
