

**Anchorage School District
Student Referral for ImPACT Post-Concussion Testing**

Parent/Guardian and Health Care Provider:

Student Name: _____ DOB: _____

School: _____ Date of Injury: _____

As part of the Anchorage School District's concussion management program, the above student has participated in ImPACT baseline screening. ImPACT is designed to provide individualized information in the form of cognitive data and symptom reporting in athletes suspected of sustaining a concussion.

An ImPACT post-injury screening is highly recommended. The post-injury screening allows the health provider to compare the student's post-concussive performance and symptoms to the student's baseline (pre-concussion) levels. This information can be used to help determine recovery from injury and safe return to participation and overall clinical management issues.

The student's ImPACT baseline data can be obtained by parents or treating providers at Alaska Neuro Associates at 277-0100. If you have questions or any difficulty in retrieving the student's data, please contact your school nurse or Nancy Edtl, Director of Nursing and Health Services, 742-4136.
