

Resolution #26

Polaris Vending Machine

Submitted by Russell Adams
February 26, 2024

Be it resolved by Polaris General Assembly, a vending machine will be installed at Polaris K-12 School.

1. **Whereas,** students are always in need of food and nutrition and often they do not get enough;
2. **Whereas,** vending machines provide quick and convenient access to food and nutrition;
3. **Whereas,** with a vending machine students would be able to get something to eat even when the cafeteria is closed;
4. **Whereas,** a vending machine would give students an option for a snack instead of asking for snacks from a friend;
5. **Whereas,** according to Food Navigator USA: "Only 36 percent of high school students eat breakfast every day, as do 50 percent of middle-school students and 77 percent of young children." ;
6. **Whereas,** a vending machine would help kids have something to eat in the morning;
7. **Whereas,** all other secondary schools in the ASD have at least one vending machine;
8. **Whereas,** a vending machine would pay for itself if used; and
9. **Whereas,** additional profits from vending machines could be used for intensive scholarships or other student activities.

Therefore, be it resolved by Polaris General Assembly, a vending machine will be installed at Polaris K-12 School.

Action Statement: If this resolution is supported by students and passes, the author would begin discussion with school administration to consider possibilities and feasibility.
